

⚠ Selection Limit

Only the first 30 of the items you selected were added to the selection.

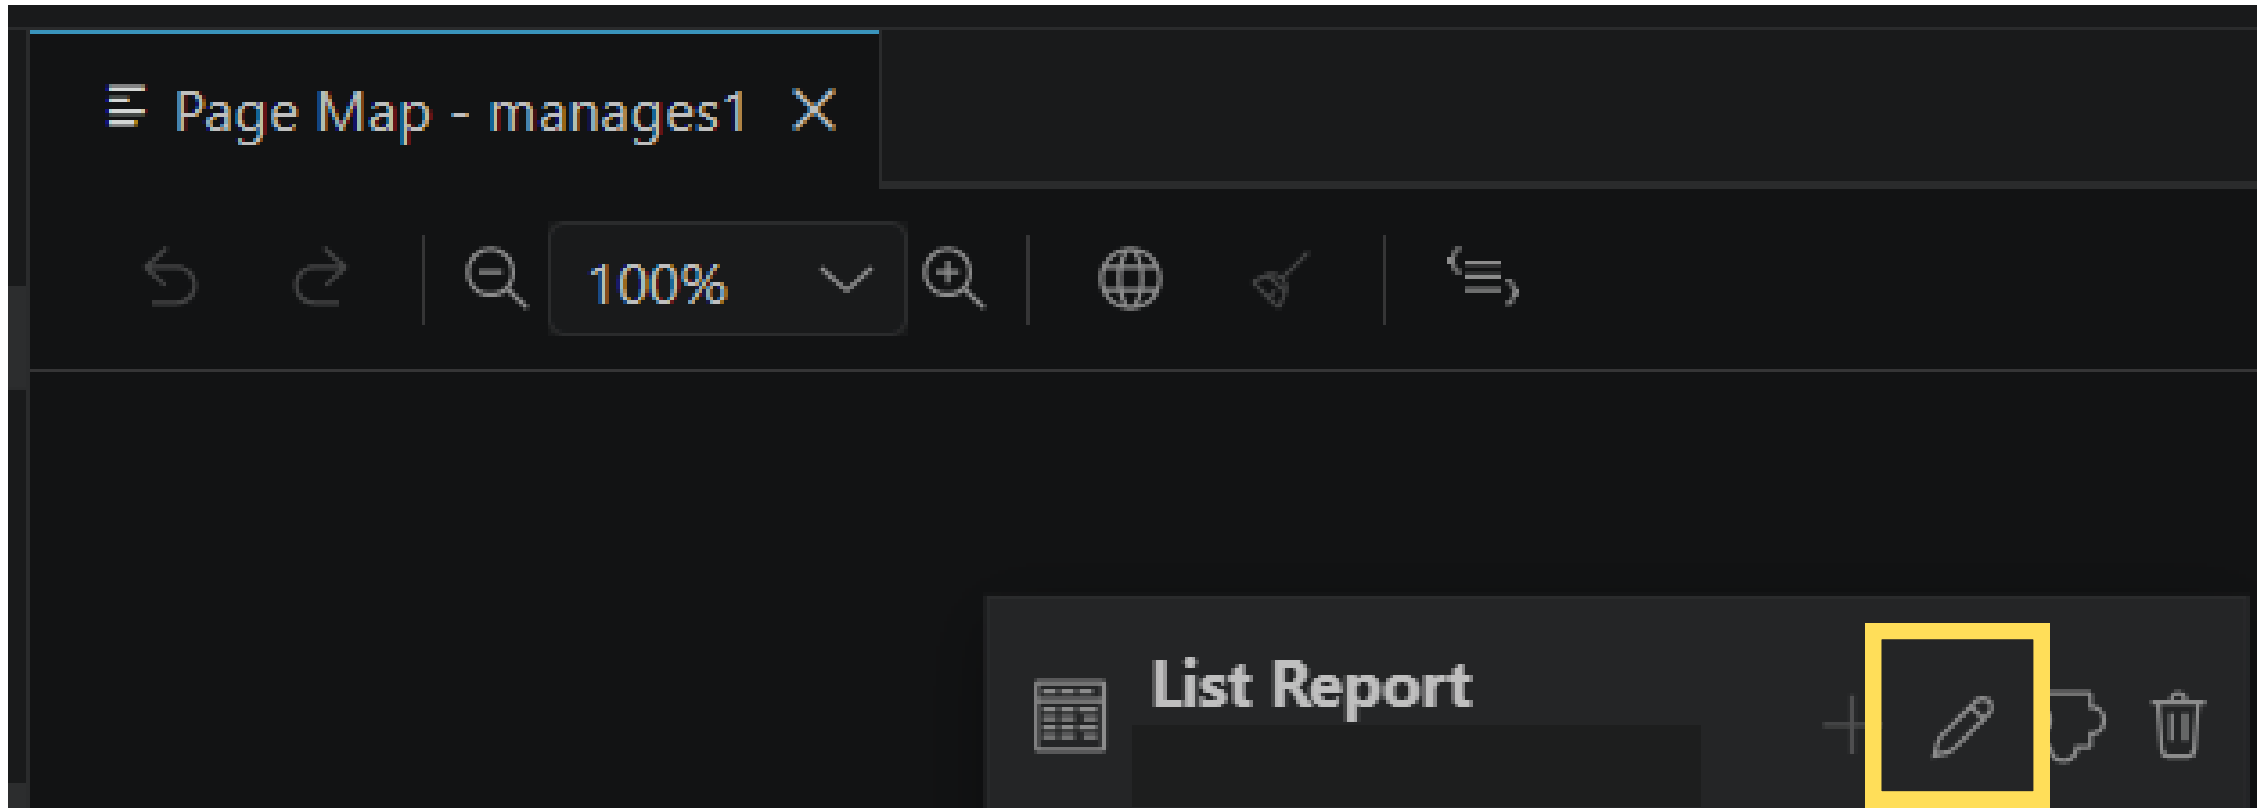

Step 1 – Create a new project using Fiori Tools (Create from template)

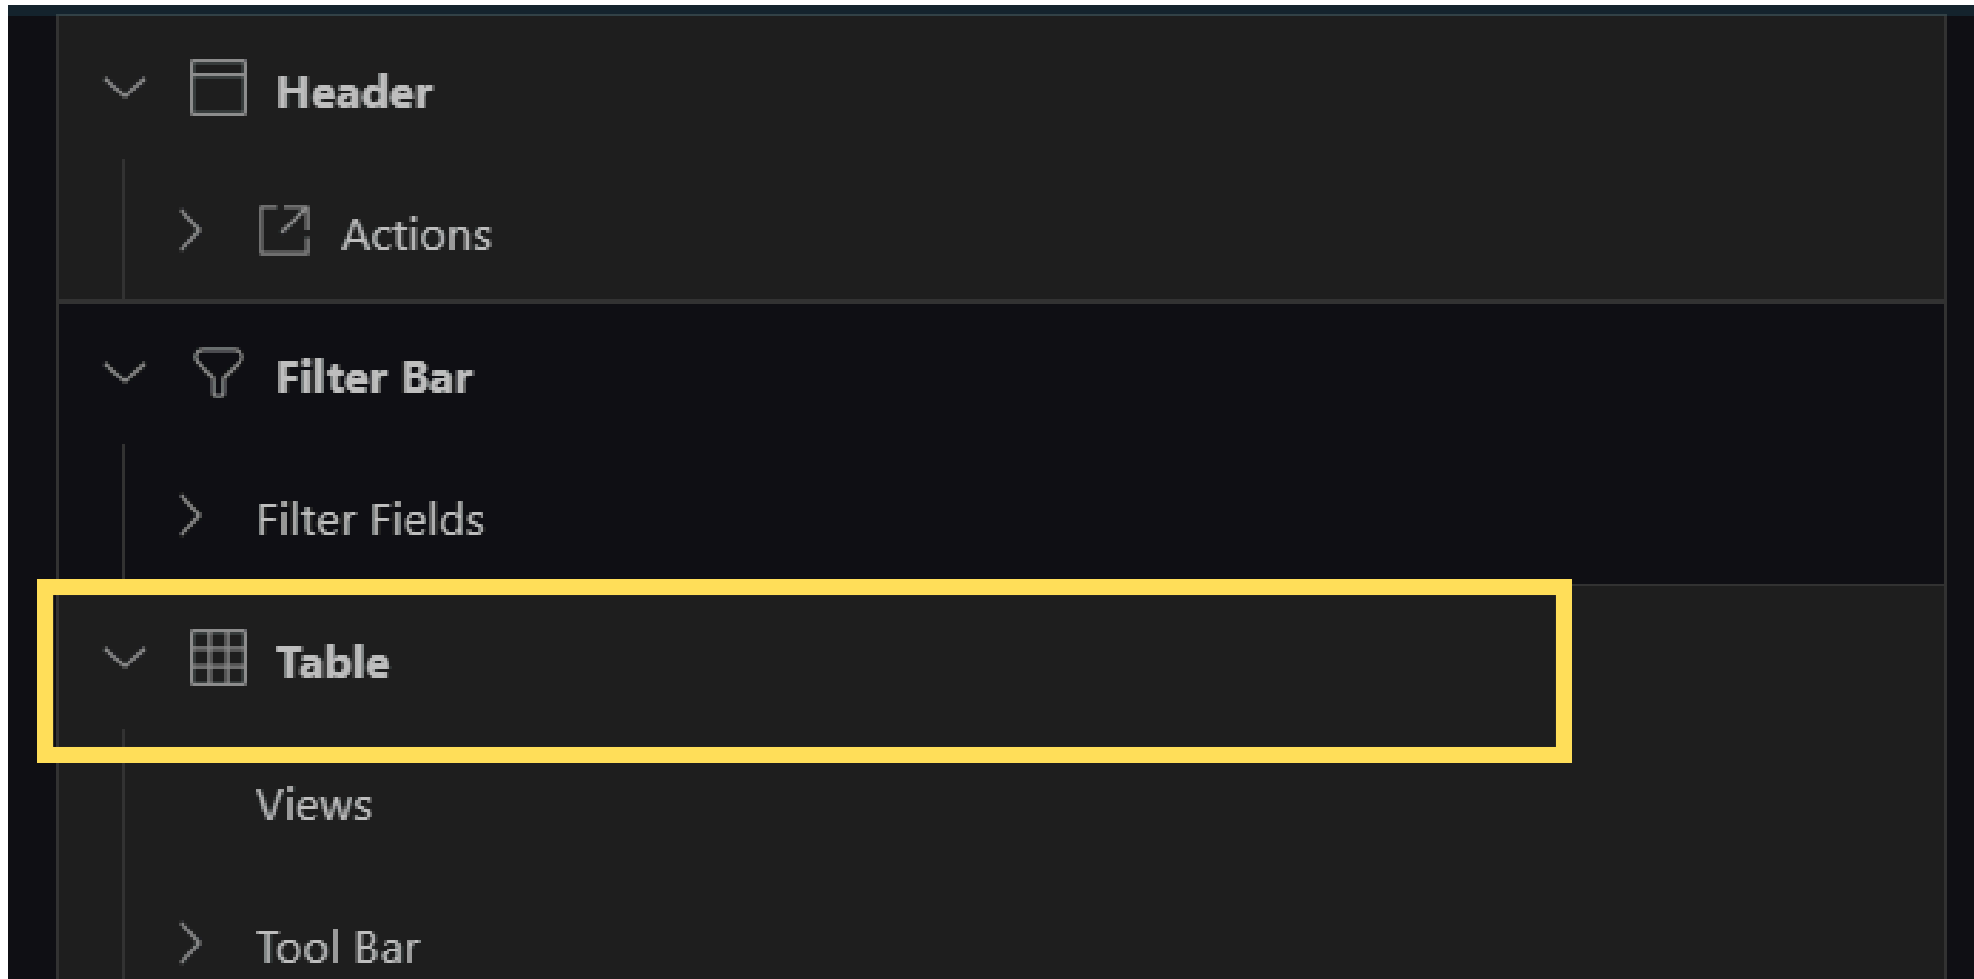

Step 2 – Right click on the webapp folder and select Show Page Map

Step 3 – Click on the Edit icon in the List Report

Step 4 – Select the Table Block

Step 5 – Use the available options to configure, such as Select All, Selection Limit, and Table Type

The screenshot displays a configuration interface for a table component. The left sidebar shows a tree view with the following items:

- Header
- Filter Bar
- Table** (selected)
- Views
- Tool Bar
- Columns

The right panel shows the configuration options for the selected 'Table' component:

- Select All** (Boolean, Configuration, Manifest)
The selectAll configuration overrides the selectionLimit and allows the user to select all the items. When set to true, the select all feature is enabled: a checkbox in the table header is displayed which selects all items when clicked.
[Dropdown menu]
- Selection Limit** (Number, Configuration, Manifest)
You can define how many items can be selected at a time using the selectionLimit.
[Dropdown menu]
- Selection Mode** (String, Configuration, Manifest, Manifest icon)
Allows you to enable or disable row selection and choose between single or multiple row selection.
 - Auto: This type is deprecated. Choose any of the following modes:
 - Multi (default): This type allows multiple table selections if relevant actions are available in the toolbar.
 - Single: This type allows single table selection if relevant actions are available in the toolbar.
 - None: No table selection is possible in display mode.
[Dropdown menu]
- Type** (String, Configuration, Manifest, Manifest icon)
Defines the table type. Note: Grid tables, analytical tables, and tree tables aren't rendered on small-screen devices. Responsive tables are shown instead.
