

System Information Bar in SAP Fiori Launchpad

If you're managing multiple systems such as development, test, or production. it's now easier than ever to identify which system you're currently working in with the new **System Information Bar** in the SAP Fiori Launchpad.

With the **ABAP Platform 2023/S4 HANA 2023 Private Cloud**, a new information bar can be displayed above the shell bar in your Fiori Launchpad. This bar provides system-related information such as the tenant’s name, system role, or client details. It’s a small yet powerful addition that helps users quickly recognize the environment they’re in reducing mistakes and improving usability.

You can easily enable and customize this feature using the following parameters:

Parameter	Description
SYS_INFO_BAR	Enables the information bar for all users.
SYS_INFO_BAR_MAIN_TEXT	The main (bold) text shown in the bar (e.g. "Test System").
SYS_INFO_BAR_SECONDARY_TEXT	Secondary descriptive text (e.g. "Client 100 – QA").
SYS_INFO_BAR_COLOR	Choose from: red, orange, green, violet, gray, pink, blue. The selected color adapts to dark/high-contrast themes.
SYS_INFO_BAR_ICON	Icon to display (e.g. sap-icon://database).

Steps to Set It Up

1. **Access Configuration:**

- For system-wide values: Go to **Transaction /UI2/FLP_SYS_CONF**
- For client-specific values: Use **Transaction /UI2/FLP_CUS_CONF**

Note: These settings are not automatically added to transport requests. You must include them manually.

2. **Maintain Parameters:**

- Go to the Launchpad Configuration and set the values for each of the above parameters.

New Entries: Overview of Added Entries

Dialog Structure

- Launchpad Configuration
 - Launchpad Plug-Ins
 - Configuration

Launchpad Configuration					
Launchpad Property ID	Type	Category	Origin	Property Value
